```
puts "Hello, World!"
```

```
interface OrderRepository extends CrudRepository<Order, Long> {  
  
    List<Order> findByCategory(String category);  
  
    Order findById(long id);  
}
```

A matrix can be written as $[[a, b], [c, d]] \begin{pmatrix} n \\ k \end{pmatrix}$.

$$\sqrt{4} = 2$$

Water (H_2O) is a critical component.

$$\sqrt{4} = 2$$

$$C = \alpha + \beta Y^{\gamma} + \epsilon$$

An e-xciting limit with LaTeX!

$$\lim_{n \rightarrow \infty} \frac{n}{\sqrt{n}\{n!\}} = \{lar \geq e\}$$

Wolpertingers are known to nest in server racks. Enter at your own risk.

Sample example, courtesy of [@aledomu](#), with inspiration from [@philwinder](#).

Equations in normal blocks

$$k_{n+1} = n^2 + k_n^2 - k_{n-1}$$

Some useful text!

Formula for quadratic root:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

--

A two-by-two matrix is invertible if
its determinant is nonzero, i.e., if

$\left[\begin{matrix}$

$\begin{matrix} a & b \\ c & d \end{matrix} \right] \neq 0$

$\end{matrix} \right] \neq 0$

$\backslash$

This result extends to $n \times n$ matrices.
